RUKRA POWER ADAPTER 9VAC

The RUKRA power adapter is designed specifically for the RUKRA GSM / PSTN interface.

The power adapter is on both sides with a mains cable and plug so that it can be directly connected to the 230VAC supply terminals of the elevator or in a wall outlet.

TIP: Make sure that you always connect this power adapter to a fixed power connector and do not install it to the cabin light because the cabin light often will be switched off when the elevator is not used for a while.
